

**REMARKS****A. Claim Amendments**

Applicant has amended claim 1 to more clearly specify that the top support beams may be adjusted independently and the lower support beams may be adjusted independently by inserting the phrase "may be adjusted independently of one another" on line 11 after the word "beams", deleting the word "or" after the word "and" on line 12 and inserting the phrase "of one another" on line 13 after the word "independently". Applicant believes that this was made clear by her last amendment and believes no further amendment is needed. However, this amendment is being made after final and under a request for continued examination without prejudice and at the Examiner's request to assist the Examiner in understanding what Applicant believes was made clear in her last amendment. Claim 7 has been amended by inserting the phrase "support beam" after the word "base" in line 2 to establish antecedent basis with claim 1. Finally, claims 10, 11, 13 and 14 have been amended to correct their dependency.

To the best of their knowledge Applicant's believe that the amendments to the specification do not add new matter.

**B. Response to Drawing Objections**

In item 2, the Examiner states that the drawing must show the headrest removably affixed to the device. Applicant directs the Examiner to Figure 1D. Applicant has shown the headrest adjacent to the sunshield to demonstrate that it is removable from the device. If the Examiner has a suggestion that he feels would better represent this action Applicant will consider such an illustration in lieu of Applicants illustration. However, Applicant believes that based on the detailed description no drawing is required for the understanding of the subject matter sought to be patented. One skilled in the art would clearly know how to make and use the device with a removable headrest as set forth in the specification without the assistance of a drawing. Therefore, Applicant is compliant with 37 C.F.R. §1.81(a). However, the Examiner may request that Applicant furnish an illustration if, and only if, the nature of the subject matter sought to be patented admits of illustration by a drawing without its being necessary for the understanding of the subject matter to be patented. Unfortunately, the Examiner has established no such admission of illustration. Therefore, Applicant is compliant with 37 C.F.R. §1.81(c). Since it is Applicants contention that no drawing is required under 37 C.F.R. §1.81(a) or (c) then the requirements set forth by 37 C.F.R. §1.83(a) do not apply and Applicant is compliant with this provision as well. In view of the above argument Applicant respectfully requests that the Examiner remove this rejection. Applicant would remove the headrest from the drawing at the Examiner's request but cannot modify the drawing without a clear justification from the Examiner based on

Chapter 37 of the Code of Federal Regulations.

### C. Response to Description of Figures Objections

In item 3, the Examiner has objected to the brief description of the drawings section because the Examiner states that there is no Figure 1. Applicant disagrees, pages 32 and 33 of the specification are clearly drawings with identifying descriptors (FIG. 1A through FIG. 1E). However, to satisfy the Examiner's request Applicant has replace the wording in the "Description of the Figures" section with the Examiner's wording to move the application expeditiously to allowance.

To the best of their knowledge Applicant's believe that the amendments to the specification do not add new matter.

### CONCLUSION

In view of the above arguments present Applicant has amended the claims and demonstrated that the invention as claimed satisfies the statutory requirements for patentability. Applicant's respectfully request that the Examiner issue an allowance of the claims.

Respectfully submitted,
